This invention relates to a modified integrin-I or integrin I-like domain polypeptide comprising at least one disulfide bond so that the domain is stabilised in a desired conformation. The polypeptide of the invention may have antiinflammatory or imunosuppressive activities. The invention may have antiinflammatory or imunosuppressive activities. The invention may have antiinflammatory or imunosuppressive activities. The invention is manufaction for an integrin a selectively bind to integrin I-commain, and for identifying a modulator of integrin activity, or of interaction of an integrin and a cognate ligand. The polypeptide of the invention, or antibodies (preferably anti-LFA-1 antibody) is useful for treating or preventing an integrin mediated disorder which is an influence of an integrin to a cognate ligand such as Crohn's disease, nephritis; human immunodeficiency virus (HIV), myocardial infarction, Slorgen's syndrome, rheumatoid arthritis, deformatitis. A therapputic composition comprising the peptide of the invention is useful for treating an integrin mediated disorder in a subject. The polypeptide of the invention is useful for and/or artive or anticonic frammate are necking as madiated disorder in a subject. The polypeptide of the invention is useful for and/or artive or anticonic frammate are necking as madiated disorder in a subject.
and/or active or antigenic fragments are useful as reagents for diagnosis of integrin-mediated disorders. The present sequence represents the human integrin.1 alpha-M protein subunit used to generate the mutant polypeptides of the invention

Use of an anti-alpha-d monoclonal antibodies for promoting locomotor recovery, inhibiting locomotor damage, limiting locomotor impairment, or limiting autonomic and sensory dysfunction following spinal cord injury.

Example 5; Page 191-194; 270pp; English.

The invention relates to promoting locomotor recovery, inhibiting autonomic locomotor damage, limiting locomotor impairment, or limiting autonomic and sensory dysfunction following spinal cord injury by administering an anti-alpha d (Beta2 integrin alpha2 subunit) monoclonal antibody to a canti-alpha d (Beta2 integrin alpha2 subunit) monoclonal antibody to a spinal cord injury victim. The method also involves the use of a ligand conscious of the spinal convolves the use of a ligand condour recovery, inhibiting locomotor damage, limiting locomotor impairment, or limiting autonomic and sensory dysfunction following spinal cord injury. In particular, the spinal cord injury comprises compression of the spinal cord. The antibodies are also useful for reducing inflammation at the site of a central nervous system injury. The specification also details the identification of Beta2 integrin alphaD condous malso details the identification of Beta2 integrins are implicated in diseases such as LAD (leukocyte adhesion deficiency, inflammatory response, diabetes, multiple sclerosis, arthritis, graft the atherosclerosis, inflammatory bowel disease, Crohn's disease, ulcerative and present sequence is a Beta2 integrin alpha subunit sequence included for comparison with the

The invention comprises structurally biased variant integrin inserted (I) domain proteins, wherein the alterations to the protein occur in at least two noncontinuous regions. Specifically the the variant integrin I domain proteins are structurally biased to exist in the open conformation, thereby altering the binding ability of the protein. The invention also comprises nucleic acids encoding the variant integrin I domain proteins. The integrin I domain proteins and nucleic acids are useful for treating, preventing or suppressing integrin related inflammatory and immunological storate season and nucleic acids arthritis). The variant integrin I domain or or proteins and nucleic acids can also be used for treating: ischaemia/ reperfusion (e.g. hypovolemic shock); infraction; cerebral shock; viral infection; and cancer. The variant integrin I domain nucleic acids and proteins may be used in gene therapy, as vaccines and to screen for bioactive agents. The present amino acid sequence represents the Mac-1

The invention relates to a binding domain-immunoglobulin fusion protein comprising a binding domain polypeptide that is fused to an immunoglobulin hinge region polypeptide, an immunoglobulin heavy chain CH2 constant region polypeptide that is fused to the hinge region polypeptide that is fused to the CH2 constant region polypeptide. The CH2 constant region polypeptide comprises: a wild-type human Igd1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues; where the mutated human Igd1 immunoglobulin hinge contains 2 cysteine residues, where the first cysteine is not mutated; a mutated human Igd1 immunoglobulin hinge region polypeptide mutated human Igd1 immunoglobulin hinge region polypeptide immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues, where the mutated human Igd1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues, where the mutated human Igd1 immunoglobulin hinge region polypeptide contains no more than one immunoglobulin place region polypeptide contains no more than one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cysteine residue; and a mutated human igdl immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues; where the mutated human igdl immunoglobulin hinge region polypeptide contains no cysteine residues. The binding domain-immunoglobulin fusion protein is capable of at least one immunoblogical activity comprising antibody dependent cell-mediated cytotoxicity (ADCC) and complement fixation. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    binding domain polypeptide is capable of specifically binding to an antigen. Also included are an isolated polynuclectide encoding the binding domain-immunoglobulin fusion protein, a recombinant expression construct comprising the polynuclectide (operably linked to a promoter), a host cell transformed or transfected with a recombinant expression construct, producing the binding domain-immunoglobulin fusion protein, a

pharmaceutical composition comprising the binding domain-immunoglobulin fusion protein or polymuclectide and a carrier, and treating a subject having or suspected of having a malignant condition or a B-cell disorder. The binding domain-immunoglobulin fusion protein is useful for treating a subject having or suspected of having a malignant condition or a B-cell disorder, e.g. melanoma, carcinoma or sarcoma, rheumatodid arthritis, myasthenia gravis, Grave's disease, type I diabetes mellitus, multiple sclerosis or autoimmune disease. The present sequence is a binding domain-immunoglobulin fusion protein-associated protein sequence. Note: The sequence data for this patent formed part of the printed specification and is also available in electronic format directly from USPTO at sequences in the printed specification bumber therefore none of the sequences can be explicitly identified.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Mac-1 alpha subunit is involved in the response to inflammation, i.e. recognition of and migration to sites of inflammation. It also attaches to cellular substrates as part of this function making it useful in visualising endothelial tissue. Mac-1 is a member of the Integrin Gene superfamily. (Updated on 22-MAR-2003 to correct PR field.) (Updated on 2-MAR-2003 to correct PR field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              염
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel isolated or recombinant modified integrin protein having extracellular domains of integrin alpha and beta subunits where one of the subunits has one or more mutations, an altered surface feature or an amino acid substitution or internal deletion, extracellular domains of the integrin beta subunit that comprise a mutation that alters a non-cysteine residue to cysteine or extracellular domains of integrin alpha and beta subunits. The polypeptide of the invention demonstrates antipsoriatic, thrombolytic, anticoagulant, osteopathic, cytosteatic, immunosuppressive, antiinflammatory, neuroprotective and antisickling activities and may be useful for immunotherapy in order to prevent or treat an integrin-mediated disorder such as an inflammatory disorder, an autoimmune disorder, thrombosis, cancer, osteoporosis, sickle cell anaemia, psoriasis and multiple subunit precursor protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                         Novel modified integrin protein having extracellular domains of integrin alpha and beta subunits or integrin alphaII and beta3 subunit, useful for treating integrin mediated disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               FPEALRGCPQEDSDIAFLIDGSGSIIPHDFRRMKEFVSTVMEQLKKSKTLFSLMQYSEEF 196

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    496
                                                                                                                                                                                               Diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, in an individual, comprises detecting the expression level of
                                                                                                                                                                                                                                                                                                                                 The present invention relates to diagnosing or monitoring transplant rejection, e.g. cardiac or kidney transplant rejection, in an individual comprises detecting the expression level of one or more genes. The methods, system and kits are useful in diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, aenotransplant rejection or mechanical organ replacement rejection, in an individual. The method is also useful in assessing the immune status of an individual. The methods are also useful in diagnosing and monitoring diseases that involve the immune system, e.g. rheumatoid arthritis, lupus, inflammatory bowel diseases, multiple sclerosis, HIV/AIDS or viral, bacterial or fungal infection. The present sequence represents a protein that is encoded by the mRNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 09

The present invention describes a method (M1) for identifying an inhibitor of HIV entry into a human host cell. (M1) comprises identifying an inhibitor of a cell surface polypeptide selected from CXCR-4 (352 amino acids, SEQ ID NO:8, ADP4405), CCR4 (360 amino acids, SEQ ID NO:14, ADP44061), CD47 (323 amino acids, SEQ ID NO:14, ADP44061), CD47 (323 amino acids, SEQ ID NO:14, ADP44063), CD68 (354 amino acids, SEQ ID NO:16, ADP44063), CD78 (335 amino acids, SEQ ID NO:16, ADP44063), CD78 (336 amino acids, SEQ ID NO:20, ADP44067), CD74 (566 amino acids, SEQ ID NO:20, ADP44067), CD74 (566 amino acids, SEQ ID NO:20, ADP44073), CBMBRI (578 amino acids, SEQ ID NO:22, ADP44077), PARA (462 amino acids, SEQ ID NO:32, ADP44077), PARA (462 amino acids, SEQ ID NO:32, ADP44077), PARA (462 amino acids, SEQ ID NO:32, ADP44077), PARA (462 amino acids, SEQ ID NO:32, ADP44077), CTREAL (150 amino acids, SEQ ID NO:30, ADP44077), CTREAL (150 amino acids, S ģ a human host cell useful for preventing and/or treating HIV infection, identifying an inhibitor of a cell surface polypeptide such as CXCR-4. exemplification of the present invention English SEQ ID NO 14; 133pp;

```
which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarched of the invention has cytostatic applications and may be useful for detecting soft tissue sarched, possibly via gene therapy or vaccine production. The nucleic sarched sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma upregulated protein of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 1163 AA;

                                                 disease (IBD)
                                                                                                                                                                                                                                   09
                                                                                                                                                                                                                                                           79
                                              The invention comprises marker genes for inflammatory bowel disease (IBI - FcgammaR IIIa, FcgammaR IIIb, Mig, NRG-2, hexokinase, HM74, REG III, LDAP, Mip-1(bbta), L-selectin, EGFL6, IDO, IL-8, CUILC, and TLR2 genes. The DNA and protein sequences of the invention are useful in the detection and treatment of IBD (e.g. ulcerative colitis and Crohn's disease). The present amino acid sequence represents an IBD marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              HGVLGPSISPSHSORIAGSOLSSRLOYFGOALSGGODLTODGLVDLAVGARGQVLLLRTR

                                                                                                                                                                                                                                                                 120
                                                                                                                                                                                                                                                                                                                    180
                                                                                                                                                                                                                                                                                          137
                                                                                                                                                                                                                                                                                                                                           197
Clone lambda X47 was isolated from a cDNA library constructed from total RNA extracted from phosbol myristate acetate stimulated HL-60 myelomonocytic cells. The library was screened with oligonucleotide probes based on tryptic peptide fragments of p150.95. The sequence can be attached to appropriate control elements and expressed in prokaryotic and eukaryotic cells. The protein can be used to treat or prevent rhinoviral infection because it interacts with ICAM-1 and inhibits cell-virus attachment. It can also be used as an anti-inflammatory agent. See also AAQ06063-4, AAR07121-8 and AAR07152-6. (Updated on 25-MAR-2003 to correct PR field.)

This sequence represents a human beta-integrin CDIIc subunit which is used to describe a method for identifying compounds that modulate the interaction of the beta-integrin alpha-d subunit with a binding partner of alpha-d which involves contacting an alpha-d polypeptide with an alpha-d binding partner, one of which is immobilised and the other of which is labelled, in the presence of a test compound, and determining if the compound affects binding between the alpha-d polypeptide and alpha-d binding partner, where the alpha-d polypeptide is alpha-d or its fragment comprising the cytoplasmic, transmembrane or extracallular domain of alpha-d is comprising the cytoplasmic, transmembrane or extracallular domain of alpha-d is comprised that modulate alpha-d binding could be used to treat diseases such as type-I diabetes, atherosclerosis, multiple sclerosis, asthma, psoriasis, lung inflammation, acute respiratory distress syndrome
                                                                                                                         1019

Integrins are a class of membrane-associated molecules that participate in cellular adhesion. Integrins are made up of an alpha subunit and a beta subunit. One class of human integrins are restricted to expression in white blood cells and have a common beta2 subunit: the leukocyte integrins, Leu-CAMS, leukointegrins or beta2 integrins. Beta2 integrins con an important role in immune and inflammatory responses. The present control in a lignment to integrin alpha subunit (D11c. This sequence was used in an alignment to identify a novel beta2 integrin alpha as used in an alignment to identify a novel beta2 integrin alpha captroniately 68 identity to the protein sequence of alpha d. The captroniately 68 identity to the protein sequence of alpha d. The Alpha d gene and protein may be useful in therapy for diseases linked to aberrant alpha d function e.g. Type I diabetes, atherosclerosis, multiple constructs as syndrome, rheumatoid arthritis and leukocyte adhesion deficiency (LAD). In addition, anti-alpha d monoclonal antibodies may be used in the system injury. The monoclonal antibodies can also be used to detect and
